

SQL problems – Part1

Using “**World**” database, do the following:

- 1- Display all data for all the countries.
- 2- Display all the languages you have. (Remove redundant data)
- 3- Display all countries that lie in Africa sorted Area.
- 4- Display all cities that have population more than 2 million.
- 5- Display all countries that became independent from 1920 to 1990
- 6- Display all countries that have no independence year.
- 7- Display all countries that have any kind of ‘Republic’ government form.
- 8- Display all countries that lie in Asia and have population more than 100 million.
- 9- Display country code for all those speak Spanish as an official language.

😊 Good Luck 😊
